/api/training/matrix	GET	Return latest matrix-style rows from local storage.
/api/training/matrix/csv-info	GET	Return CSV export configuration information.
/api/logging/status	GET	Return status of ICAO Excel, master workbook and matrix CSV logging.
/api/training/trajectory	GET	Return trajectory history for one flight or all flights.
/api/training/trajectory/export	GET	Write and report a CSV trajectory export.

4. SYSTEM DESIGN (SDS)

4.1 High-Level Design

The project is divided into five major layers: data source, decoder, preprocessor, storage and web dashboard. This separation keeps the implementation clear. The decoder is responsible for understanding PingStation frames, the preprocessor ensures consistent values, the storage module preserves current and historical aircraft data, and the Flask application exposes the results to the browser.
